XX Hom
OS Gard
OS Hom
OS Hom comprising two polypeptide subunits IL-20RA (formerly known as ZcytoR7) and IL-20RB (formerly known as DIRS1). The two subunits are preferably linked together. In one embodiment, one subunit is fused to the constant region of the light chain of an immunoglobulin, and the other subunit is fused to constant region of the heavy chain of an immunoglobulin. The light chain and the heavy chain are connected via a disulphide bond. The soluble receptor can be used to down-regulate IL-20 and thus treat inflammatory diseases such as psoriasis, inflammatory lung injury such as The invention relates to an interleukin 20 (IL-20) soluble receptor or bronchitis, adult respiratory disease (ARD), septic ae

The invention describes a method (I) for treating a mammal afflicted with a disease in which an interleukin-20 (II-20) polypeptide plays a role comprising administering antagonist of the II-20 polypeptide to the CC comprising administering antagonist of the II-20 polypeptide to the CC comprising administering antagonist of the III-20 polypeptide to the CC comprising administering tytokine in the inflammatory process is CC via chemotaxis and the release of granule enzymes. II-8 binds to CC via chemotaxis and the release of granule enzymes. II-8 binds to CC periodontal disease are characterised by the influx of neutrophils. II-8 is a potent inducer of angiogenesis in several angiogenesis-dependent chronic inflammatory conditions, including rheumatoid arthritis, is an cimportant source of angiogenic activity in human lung cancer. Also, II-8 is an CC important source of angiogenic activity in human lung cancer. Also, II-8 cxpression correlates with experimental metastatic activity of some melanoma cell lines. Therefore an effective method to treat inflammatory diseases would be to administer an agent that would inhibit II-8. It has been shown that II-20 up-regulates II-8. Therefore antagonists to II-20 can be used to treat these diseases. The method is used for treating cinjury, cancer, meningitis, rheumatic diseases, idiopathic pulmonary fibrosis, cataracts, reperfusion can fibrosis, inflammatory bowel disease (lacerative colitis), skin disease (ground states) and contact dermatitis) or an activity and pneumonia). This sequence represents a human interleukin-cc 20 (II-20) polypeptide used in developing the method of the invention

The method involves administration of a polypeptide comprised of the extracellular domain of interleukin-20 receptor alpha (IL-20RA) and the extracellular domain of interleukin-20 receptor beta (IL-20RB). The IL-20RA and IL-20RB are heterodimeric receptors that bind to both IL-19 and dda7. The method is useful for down-regulating IL-19, useful for the treatment of inflammation e.g., in diabetes, artheroselerosis, cataracts, reperfusion injury, cancer, infectious meningitis, rheumatoid arthritis, rheumatoid ever and systemic lupus erythematosus. The present sequence is human IL-20RA mature extracellular protein

                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the protein sequence of the human soluble interleukin-20 (II20) receptor alpha subunit. The invention provides a method for the treatment and/or prevention of inflammation, immune system, cardiovascular and haematopoietic disorders and regulation of cellular proliferation by inhibiting the binding of a cytokine (e.g. interleukin-19, interleukin-20 and/or interleukin-24) to its receptor complex, thereby preventing signal transduction. The method uses purified soluble receptor proteins, such as the soluble II20 receptor alpha subunit. A pharmaceutical composition comprising the polypeptide, or a fusion protein including the polypeptide, is useful for modulating the physiology or development of a cell in vivo, in vitro and/or in situ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treating or preventing inflammation, immune system, cardiovascular and hematopoietic disorders, and regulation of cellular proliferation comprises administering proteins inhibiting cytokine signaling, e.g.
                                                                                                                                                                                                                                                                                                                                                                           Sequence

The PRO polypeptides are useful to detect other PRO CC polypeptides, to link bioactive molecules to cells expressing PRO CC polypeptides, to modulate biological activities of cells expressing PRO CC polypeptides, and to detect the presence of mammalian lung, colon, CC breast, prostate, rectal, cervical or liver tumours by comparing PRO CC polypeptide expression in a cell sample to that in a control sample. Some CC of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the proliferation or control sample. Some CC officerentiation of chondrocytes, the proliferation or gene expression in CC pericyte cells, the release of proteoglycans from cartilage, the CC proliferation of inner ear utricular supporting cells or of T-CC lymphocytes, the release of a cycokine from peripheral blood monocytes (CBMCs), or the proliferation of endochelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal CC muscle cells or by adipocytes; or inhibit binding of A-peptide to factor CC UTA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polynucleotides encoding PRO CC polypeptides can be used to generate probes, antisense RNA/DNA, CC transgenic or knock out animals and can be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

Novel nucleic acids encoding PRO polypeptides, used to presence of tumors, such as prostate and breast tumors, screen for modulators of the compounds. diagnose the the and ç

Claim 11; Fig 398; 774pp; English.

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention. The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the anima and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate animal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders

syndrome New secreted and transmembrane PRO nucleic acids, for inflammation, organ failure, atherosclerosis, cardiac infertility, birth defects, premature aging, axquired syndrome (AIDS), or cancer. treating injury, immunodeficiency

Claim 12; Fig 188; 660pp; English.

The invention describes an isolated nucleic acid (I) comprising, or which has 80 % sequence identity to, or the full-length coding sequence of, on of 275 nucleotide sequences, and which encodes a corresponding polypeptide selected from 275 amino acid sequences, where all sequences are given in the specification. The polypeptide encoded by (I) is used to detect PRO polypeptides, link a bioactive molecule to a cell expressing after the polypeptide, modulate a biological activity of a cell, stimulate the release of tumour necrosis factor (TNF)-alpha from human blood, modulate 0f tumour necrosis factor (TNF)-alpha of glucose or free fatty acid by ce cells, stimulate 유 or which e of, one a to

The nucleic diseases, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, acquired immunodeficiency syndrome (AIDS), cancer, or diabetic complications. The nucleic acid is useful as hybridisation probes, in chromosome and gene mapping, and in generating antisense RNA or DNA. The polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. Both are useful in tissue typing. This is the amino acid sequence of a novel human secreted and Sequence 542 AA; 199 139 181 121 79 61 INRTYCDLSAETSDYEHQYYAKVKAIWGTKCSKWAESGRFYPFLETQIGPPEVALTTDEK 120 19 ш PNTLYCVHVESFVPGPPRRAQPSEKQCARTLKDQSSEFKAK 221 SISVVLTAPEKMKRNPEDLPVSMQQIYSNLKYNVSVLNTKSNRTMSQCVTNHTLVLTMLE 180 SISVVLTAPEKWKRNPEDLPVSMQQIYSNLKYNVSVLNTKSNRTWSQCVTNHTLVLTWLE INRTYCOLSAETSDYEHQYYAKVKAIWGTKCSKWAESGRFYPFLETQIGPPEVALTTDEK Length 542; Indels 0; Gaps 198 78 0;

Isolated interleukin 20 soluble receptor comprising two polypeptide subunits IL-20RA and IL-20RB, useful for down-regulating IL-20 and thus treating inflammatory diseases such as psoriasis. WPI; 2001-398320/42.

Claim 1; Page 69; 119pp; English.

The invention relates to an interleukin 20 (II-20) soluble receptor comprising two polypeptide subunits II-20RA (formerly known as ZcytoR7) and II-20RB (formerly known as IRS1). The two subunits are preferably linked together. In one embodiment, one subunit is fused to the constant region of the light chain of an immunoglobulin, and the other subunit is fused to constant region of the heavy chain of an immunoglobulin. The light chain and the heavy chain are connected via a disulphide bond. The soluble receptor can be used to down-regulate II-20 and thus treat inflammatory diseases such as psoriasis, inflammatory lung injury such as asthma or bronchitis, adult respiratory disease (ARD), septic shock,

CC The invention describes a method (I) for treating a mammal afflicted with CC a disease in which an interleukin-20 (IL-20) polypeptide plays a role CC comprising administering antagonist of the IL-20 polypeptide to the CC comprising administering antagonist of the IL-20 polypeptide to the CC individual. An important cytokine in the inflammatory process is CC interleukin-8 (IL-8), a chemokine that acts as an agonist for neutrophils controlled to the release of granule enzymes. IL-8 binds to controlled the release of granule enzymes. IL-8 binds to controlled the release of granule enzymes. IL-8 binds to controlled the release of granule enzymes. IL-8 binds to controlled the release of granule enzymes. IL-8 binds to controlled the release of granule enzymes. IL-8 binds to controlled the release of granule enzymes. IL-8 binds to controlled the release of granule enzymes. IL-8 binds to controlled the release of granule enzymes. IL-8 binds to controlled the release of granule enzymes. IL-8 binds to controlled the release of granule enzymes. IL-8 is an controlled the release of angiogenesis in several angiogenesis-dependent controlled the source of angiogenic activity in human lung cancer. Also, IL-8 controlled the controlled the expression correlates with experimental metastatic activity of some controlled the controlled the experimental metastatic activity of some controlled the treat these diseases. The method to treat inflammatory controlled the service of seases including diabetes. The method is used for treating controlled the service of seases including diabetes, arteriosclerosis, cataracts, reperfusion conflictions. The method is used for treating controlled the service of seases (alphabetic pulmonary controlled the service of seases, idiopathic pulmonary controlled the service of seases (alphabetic pulmonary controlled the service of seases (alphabetic pulmonary controlled the service of seases (alphabetic pulmonary controlled the service of seases, idiopathic pulmonary controlled the service of seases (alp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Treating inflammatory skin and lung diseases using antibodies against interleukins (IL)-20 (which indirectly modulates activation of IL-8), useful for treating e.g. psoriasis, asthma and bronchitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Blumberg
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Η,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eagan MA,

The method involves administration of a polypeptide comprised of the extracellular domain of interleukin-20 receptor alpha (IL-20RA) and the extracellular domain of interleukin-20 receptor beta (IL-20RA). The IL-20RA and IL-20RB are heterodimeric receptors that bind to both IL-19 and mda7. The method is useful for down-regulating IL-19, useful for the treatment of inflammation e.g., in diabetes, artherosclerosis, cataracts, reperfusion injury, cancer, infectious meningitis, rheumatoid arthritis, rheumatoid ever and systemic lupus erythematosus. The present sequence is human IL-20RB extracellular domain protein
                         Human IL-22RB protein

Human interleukin receptor IL-20RB

extracellular domain interleukin;

mature protein. IL-20RA subunit;

IL-20;

inflammation; single chain antibody;

06-MAY-2004

                                                                                                                                                                                                                                                                                                                           The invention relates to a novel method of reducing or treating inflammation in a mammal which comprises administering an antibody, antibody fragment or single chain antibody which specifically binds to a receptor of interleukin (II)-20 comprising an IL-20RA subunit and an IL-20RB subunit. The method of the invention has antiinflammatory, dermatological, antipsoriatic, antiarthritic, respiratory, antiasthmatic, applications and may be useful for reducing or treating an inflammatory including an inflammatory skin disease such as psoriasis, eczema, atopic dermatitis and contact dermatitis or an inflammatory lung disease such as adult respiratory distress syndrome, asthma, bronchitis and pneumonia, as well as arthritis, septic shock, multiple organ failure, inflammatory bowel disease, ulcerative colitis or Crohn's disease. The current sequence is that of the human IL-20RB subunit-related protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Reducing or treating inflammation, e.g. inflammatory lung disease, comprises administering an antibody, antibody fragment or single chain antibody that specifically binds to an interleukin (IL)-20RA subunit of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IL-20RB subunit; antiinflammatory; dermatological; antipsoriatic; antiarthritic; respiratory; antiasthmatic; antiulcer; antibacteri immunosuppressive; gastrointestinal; skin; psoriasis; eczema; atopic dermatitis; contact dermatitis; lung; adult respiratory distress syndrome; asthma; bronchitis; pneumoni arthritis; septic shock, multiple organ failure; bowel; ulcerative colitis; Crohn's disease; human; receptor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    comprises administering an antibody, antibody that specifically binds to an IL-20 receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Thompson P,

The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood cosgulation disorders, cancers (callular adhesion disorders. They may also be used to raise antibodies. AAZ33381 to AAZ34338, and AAY41685 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present invention
                                                                                                                               Claim
                                                                                                                                                    New secreted and transmembrane polypeptides and useful for treating blood coagulation disorders, adhesion disorders.
                                                                                                                                                                                                   WPI; 1999-551358/46.

                                                                                                                                    The invention provides membrane-bound PRO polypeptides and polynucleotides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have homology with proteins including LDL receptors, TIE ligands and various enzymes. The membrane-bound proteins and receptor molecules are useful as pharmaceutical and diagnostic agents. Receptor immunoadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially by recombinant techniques
                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2000-072883/06.

The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for CC proteins, anti-PRO antibodies, agonists and antagonists are useful for CC treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, contected from systemic lupus erythematosus, rheumatoid arthritis, contected from systemic lupus erythematosus, rheumatoid arthritis, contected from systemic vasculitis, sarcoidosis, autoimmune haemolytic content of the control and content of the control of the control and content of the lung, and transplantation associated disease, autoimmune cor immune-mediated skin diseases, allergic diseases, inflammatory bowel content of the lung, and transplantation associated diseases including cor immune-mediated skin diseases, allergic diseases, immunological cor immune-mediated skin diseases, allergic diseases, insmunological cor immune-mediated skin diseases, allergic diseases, allergic diseases including cor immune-mediated skin diseases, allergic dis

INFR-HKABF92 polypeptides are used in the treatment of disorders associated with viral infection, immune dysfunction and proliferative diseases such as cancer, inflammatory disorders, persistent infection, inflammatory disorders, immunosuppression, inflammatory bowel disease, or myelosuppression. The products can also be activates Jaks-STATS signal transduction pathway in a dose-dependent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in the isolation of the
                                                                                                                                                                                                                                                                                                                                  Protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  respectively. The proteins, cDNA and their modulators can be used for the treatment of viral and bacterial infection, inflammatory and autoimmune disorders, vascular injury and inhibition of angiogenesis. In particular, TANGO 241 can be used to treat pancreatic disorders and TANGO 242 can be used to treat pancreatic disorders.
